## Visual Adjustments

Control how text and colors appear on the page — essential for users with low vision, color sensitivity, or reading difficulties.

### Font Size

FONTSIZE

#### DESCRIPTION

Scales all text on the page proportionally in 5 progressive steps (100% → 110% → 120% → 130% → 150%). Does not break layouts because scaling is applied via CSS custom properties on the body and respected by responsive designs.

#### WHO BENEFITS

- ✓ Users with low vision, presbyopia, or aging eyesight
- ✓ Anyone reading on small screens or at a distance
- ✓ Users with mild visual fatigue from prolonged screen time

#### EFFECT

Body text, headings, buttons, and labels all grow at a proportional rate. Clicking the feature cycles through 5 levels and then resets.

## Font Family

FONTFAMILY

### DESCRIPTION

Replaces the page typeface with one of 4 alternatives: Default (site default), Readable (Atkinson Hyperlegible / high-legibility sans-serif), Dyslexia (OpenDyslexic-style font with weighted bottom letters), or Monospace (fixed-width for code-like clarity).

### WHO BENEFITS

- ✓ Users with dyslexia, who benefit from letter-distinctive fonts
- ✓ Users who find decorative site fonts hard to read
- ✓ Users with visual processing differences

### EFFECT

All text across the page switches to the selected font while preserving size and structure.

## Line Height

LINEHEIGHT

### DESCRIPTION

Increases vertical spacing between lines of text in 3 steps (normal → 1.5× → 2×). Reduces visual crowding and makes it easier to track lines of running text.

### WHO BENEFITS

- ✓ Users with dyslexia or reading tracking difficulties
- ✓ Users with attention-related conditions (ADHD)
- ✓ Anyone reading long articles or dense content

### EFFECT

Paragraphs and lists become airier; lines no longer appear cramped, making vertical reading smoother.

## Letter Spacing

LETTERSPACING

### DESCRIPTION

Spreads individual characters apart in 3 steps (normal → 0.05em → 0.1em). Prevents letters from visually merging, which is a common challenge in dyslexia and certain vision conditions.

### WHO BENEFITS

- ✓ Users with dyslexia who experience "letter crowding"
- ✓ Users with low vision or astigmatism
- ✓ Users learning a new language or script

### EFFECT

Each letter within every word becomes more distinct, reducing confusion between similar-looking characters (e.g., "rn" vs "m").

## Text Alignment

TEXTALIGN

### DESCRIPTION

Forces all body text to left-align (or right-align in RTL/Arabic context). Eliminates "justified" text, which creates uneven word spacing — a well-documented barrier for dyslexic readers.

### WHO BENEFITS

- ✓ Users with dyslexia (WCAG strongly recommends avoiding justified text)
- ✓ Users who find uneven spacing distracting

### EFFECT

Paragraphs get even, predictable left/right edges; word spacing becomes uniform.

## High Contrast

HIGHCONTRAST

### DESCRIPTION

Applies a black background with bright yellow text for all content. Produces the maximum possible contrast ratio ( $\approx 19.5:1$ ), far exceeding WCAG AAA ( $7:1$ ).

### WHO BENEFITS

- ✓ Users with severe low vision or macular degeneration
- ✓ Users with photosensitivity or glare sensitivity
- ✓ Users reading in bright outdoor environments

### EFFECT

Entire page switches to black + yellow. Mutually exclusive with Dark Mode, Light Mode, Grayscale, Invert, and Mute Colors.

## Dark Mode

DARKMODE

### DESCRIPTION

Inverts the lightness of the page: backgrounds become dark, text becomes light. Preserves hue and colors (unlike pure invert), so images and logos remain recognizable.

### WHO BENEFITS

- ✓ Users with light sensitivity or migraines
- ✓ Users reading at night or in low-light rooms
- ✓ Users who experience eye strain from bright whites

### EFFECT

Backgrounds turn near-black; text turns near-white. Mutually exclusive with High Contrast, Light Mode, Grayscale, Invert, and Mute Colors.

## Light Mode

LIGHTMODE

### DESCRIPTION

Forces a bright white background with dark text, overriding any site theme. Useful when a site uses a dark theme that a user finds hard to read.

### WHO BENEFITS

- ✓ Users with cataracts (often struggle with dark backgrounds)
- ✓ Users who need maximum text clarity
- ✓ Users taking notes or studying from the page

### EFFECT

White background + black text applied globally. Mutually exclusive with High Contrast, Dark Mode, Grayscale, Invert, and Mute Colors.

## Grayscale

GRAYSCALE

### DESCRIPTION

Removes all color from the page, applying a 100% grayscale CSS filter. Content becomes a pure black-and-white image with preserved brightness relationships.

### WHO BENEFITS

- ✓ Users with color vision deficiency (colorblindness)
- ✓ Users distracted by bright colors (ADHD, cognitive sensitivities)
- ✓ Users whose sites convey meaning only via color

### EFFECT

Every element — images, icons, backgrounds — becomes grayscale. Mutually exclusive with the other color-mode toggles.

## Invert Colors

INVERTCOLORS

### DESCRIPTION

Applies a full CSS invert filter to every visible color (e.g., black → white, red → cyan). Different from Dark Mode because it also flips image hues.

### WHO BENEFITS

- ✓ Users with severe light sensitivity
- ✓ Users preferring maximum visual differentiation
- ✓ Users with specific visual preferences unmet by dark mode

### EFFECT

Every color shifts to its opposite on the color wheel. Mutually exclusive with other color-mode toggles.

## Mute Colors

MUTECOLORS

### DESCRIPTION

Desaturates colors by 60%, producing a softer, less intense palette without going fully grayscale. Ideal for reducing visual stimulation without losing color cues.

### WHO BENEFITS

- ✓ Users with sensory processing sensitivities or autism
- ✓ Users prone to seizures triggered by saturated colors
- ✓ Users with migraine-related visual triggers

### EFFECT

Colors become muted and pastel-like. Mutually exclusive with other color-mode toggles.

## Highlight Links

HIGHLIGHTLINKS

### DESCRIPTION

Adds a bright yellow background and thick underline to every hyperlink on the page. Makes interactive elements immediately scannable.

### WHO BENEFITS

- ✓ Users with cognitive difficulties identifying clickable elements
- ✓ Users on sites with low-contrast or unconventional link styling
- ✓ Users with low vision who cannot easily spot subtle hover cues

### EFFECT

All `<a>` elements become visually distinct with yellow highlighting and a bold underline.

## Highlight Headings

HIGHLIGHTHEADINGS

### DESCRIPTION

Adds a visible background and border to every heading (h1 through h6) on the page, making document structure scannable at a glance.

### WHO BENEFITS

- ✓ Users with cognitive differences who benefit from structural cues
- ✓ Users skimming long articles for specific sections
- ✓ Screen-reader users visually verifying heading hierarchy

### EFFECT

Each heading gets a colored background box, giving the page a more structured, outline-like appearance.

# Reading Tools

Specialized tools for readers who need visual focus assistance or have learning differences.

## Reading Mask

READINGMASK

### DESCRIPTION

Creates a horizontal "spotlight band" that follows the cursor vertically. The rest of the screen is dimmed via a dark box-shadow overlay, leaving only a narrow strip clearly visible.

### WHO BENEFITS

- ✓ Users with ADHD, autism, or attention difficulties
- ✓ Users with reading comprehension challenges
- ✓ Users who lose their place on long pages

### EFFECT

Only a horizontal strip (approximately 100px tall) around the cursor stays lit; the rest fades to dark, forcing visual focus onto one line.

## Reading Guide

READINGGUIDE

### DESCRIPTION

Draws a thin (2px) colored horizontal line that tracks the cursor, mimicking a physical reading ruler. Helps readers follow a specific line of text without losing place.

### WHO BENEFITS

- ✓ Users with dyslexia (line-tracking difficulties)
- ✓ Users with visual perception issues
- ✓ Children and adults learning to read

### EFFECT

A persistent blue line follows the mouse cursor horizontally, acting as a digital reading ruler without hiding any content.

## Focus Mode

FOCUSMODE

### DESCRIPTION

Dims sidebars, navigation, ads, and non-primary content while keeping the main article or content column fully visible. Reduces distractions from peripheral page elements.

### WHO BENEFITS

- ✓ Users with ADHD or attention regulation challenges
- ✓ Users with autism who are overwhelmed by busy layouts
- ✓ Anyone trying to focus on a long article

### EFFECT

Non-essential elements (nav, aside, footer, ads) become ~20% opaque; the main content remains fully visible.

## Dyslexia-Friendly Font

DYSLEXIAFONT

### DESCRIPTION

One-click preset that applies a dyslexia-optimized typeface (OpenDyslexic-style) with weighted bottom letters that prevent characters from appearing to "flip" or merge — a common dyslexic reading challenge.

### WHO BENEFITS

- ✓ Users with dyslexia (primary use case)
- ✓ Users with broader reading or learning disabilities

### EFFECT

Full page switches to the dyslexia-friendly font. Equivalent to selecting "dyslexia" from the Font Family option, with a dedicated one-click toggle.

## Pause Animations

PAUSEANIMATIONS

### DESCRIPTION

Stops all CSS animations, transitions, auto-playing videos, GIFs, and carousels on the page. Respects prefers-reduced-motion semantics for a safer experience.

### WHO BENEFITS

- ✓ Users prone to seizures (photosensitive epilepsy)
- ✓ Users with vestibular disorders (motion sickness from movement)
- ✓ Users with ADHD distracted by movement

### EFFECT

All motion on the page stops immediately. Videos pause at current frame; carousels freeze; animations halt.

## Navigation & Motor

Tools for users navigating without a mouse or requiring larger interactive targets.

## Big Cursor

BIGCURSOR

### DESCRIPTION

Replaces the default mouse cursor with a much larger (64×64 px) high-contrast black cursor delivered via inline SVG data URI. Easier to locate and track across the screen.

### WHO BENEFITS

- ✓ Users with low vision who lose track of the pointer
- ✓ Users with motor conditions (tremors, Parkinson's) needing larger targets
- ✓ Older users or anyone using a high-resolution display

### EFFECT

The mouse pointer becomes a prominent, easy-to-spot arrow visible across any background.

## Keyboard Navigation

KEYBOARDNAV

### DESCRIPTION

Enhances visible keyboard focus styles with a thick, high-contrast outline on every focusable element (buttons, links, inputs) — even if the original site suppresses default focus rings.

### WHO BENEFITS

- ✓ Users who cannot use a mouse (motor disabilities)
- ✓ Users who prefer keyboard navigation (power users, screen-reader users)
- ✓ Users on sites that violate WCAG 2.4.7 (Focus Visible)

### EFFECT

Every element reached via Tab/Shift-Tab gets a highly visible blue or yellow outline.

## Skip to Content

SKIPCONTENT

### DESCRIPTION

Injects a "Skip to main content" link as the first focusable element on the page. Pressing Tab once reveals it, allowing keyboard and screen-reader users to bypass repetitive navigation menus.

### WHO BENEFITS

- ✓ Screen-reader users (saves dozens of keystrokes per page)
- ✓ Keyboard-only users with motor disabilities
- ✓ Users on cognitively overwhelming pages

### EFFECT

A "Skip to main content" button appears at the top-left when focused, jumping the user directly to <main> or the primary content region.

## Audio

Text-to-speech and sound control tools that adapt the auditory experience.

### Text-to-Speech

TEXTTOSPEECH

#### DESCRIPTION

Activates click-to-read mode. Once enabled, clicking any text element on the page reads it aloud using the browser's built-in Web Speech API (SpeechSynthesis). Automatically selects Arabic (ar-SA) or English (en-US) voice based on the detected page language.

#### WHO BENEFITS

- ✓ Users who are blind or have severe visual impairment
- ✓ Users with dyslexia or reading difficulties
- ✓ Non-native speakers learning pronunciation
- ✓ Users multitasking (listen while driving, cooking, etc.)

#### EFFECT

When active, a  cursor indicates clickable text; clicking triggers speech playback in the page language.

### Mute Sounds

MUTESOUNDS

#### DESCRIPTION

Instantly mutes every audio element, video, and embedded media player on the page by setting their muted property to true.

#### WHO BENEFITS

- ✓ Users in quiet environments (libraries, offices, public transport)
- ✓ Users with auditory sensitivities or misophonia
- ✓ Users with hearing aids who need consistent sound control

#### EFFECT

All media on the page goes silent immediately; playback continues without sound.

## Accessibility Profiles

One-click presets that combine multiple features to address specific accessibility needs. Designed so users don't have to know which individual features help them.

### Visually Impaired

For users with low vision, macular degeneration, or partial sight loss. Enlarges text, maximizes contrast, and makes interactive elements easy to locate.

Font Size +2

High Contrast

Highlight Links

Big Cursor

Keyboard Nav

### Low Vision

For readers with mild-to-moderate vision reduction. Increases text size and spacing, switches to a highly readable font, and highlights page structure.

Font Size +3

Readable Font

Line Height ×2

High Contrast

Highlight Links

Highlight Headings

### Dyslexia

For users with dyslexia or other reading differences. Applies a dyslexia-optimized font with increased spacing, and eliminates justified text that can be disorienting.

Dyslexia Font

Line Height ×2

Letter Spacing +2

Left Align

Highlight Links

### Seizure Safe

For users with photosensitive epilepsy, migraines, or vestibular disorders. Stops all motion, reduces color saturation, and enforces a calm light interface.

Pause Animations

Mute Colors

Light Mode

## Cognitive Support

For users with ADHD, autism, or other cognitive needs. Reduces distractions, provides focus aids, and simplifies the reading experience.

Readable Font

Line Height +1

Focus Mode

Reading Guide

Pause Animations

Left Align

## Keyboard Navigation

For users who navigate without a mouse — including screen-reader users, motor-disabled users, and keyboard power users.
